EXPERIENCE

HUNTIQUE, Remote — *Web Development*

September 2024 - PRESENT

- Develop and maintain responsive web applications, improving functionality and user experience.
- Implement frontend features, troubleshoot issues, and optimize application performance.

UBCO, Kelowna — *Computer Science Research Assistant*

September 2022 - March 2026

- Supported computer science research through software development, data analysis, and technical problem-solving.
- Collaborated with researchers on application testing, technical investigations, and documentation.

PROJECTS

Telegraph Marine Harbour — *Web Development*

- Developed full-stack features for a marina management and booking platform, including membership management and booking workflows.
- Updated Django models, serializers, and database migrations while improving responsive UI components and form validation.

Gamification — *Data Analysis, Web Development, Testing*

- Contributed to application development, data analysis, and software testing for a gamification-focused research project.

Exam Generation System — *Web Development, Cyber Security*

- Built an exam management system with question randomization, multiple exam variants, and PDF generation.
- Designed database relationships, backend APIs, and automated tests to support reliable exam creation and management.
